Company profile

Activelements is a company specialised in consultancy and implementation of solutions for a better and sustainable indoor and outdoor environment. We offer products of high quality and using unique technologies in the field of:

- Light - full spectrum daylight bulbs and fluorescent tubes
- Air - purification systems for businesses and individuals
- **Water**

Activelements and PannonFarm are partners in the Benelux and now are jointly introducing their **water treatment** solutions in Morocco.

Agriculture

Activelements and PannonFarm supply water treatment and irrigation systems as well as soil improvement solutions for a wide variety of agricultural applications from conventional to green house farming. The benefit of our solutions is most convincing in farming under difficult conditions, such as in poor soil, under extreme climate conditions (e.g. drought and strongly irregular rainfall) and where crop yields are reduced by difficult-to-control diseases. We use only natural ingredients in all water and soil treatment solutions, so that they can be used in both conventional and organic farming.

The water treatment technology is already successfully applied in more than 20.000 ha of agriculture. Co-financing on governmental level is available for projects.

Drinking-water

Activelements and PannonFarm also supply water treatment equipment for drinking water in domestic and local communal supply for capacities of up to 2500 litre/h. Several governments have already acquired our products.

Animals

Our technology is also applied on several livestock breeding farms, with animals such as chickens, pigs, cows. Results translate in e.g. greater number of newborns, greater weight accumulation, better utilization of nutritives, longer production period. Great results have also been achieved with racing horses.

Our water treatment systems can be implemented in any process where water is used. Please contact us for more information on your field of interest.

Activelements is a trading name of Peters and Peters, a company that has 8 years of experience in the field of sustainable indoor and outdoor environment.

We will publish more information in English on this website soon!
